

Parents for Safe Schools

Does your child have any of these unexplained symptoms?

Headaches, dizziness, anxiety, rapid heart, nose bleeds, tinnitus, red and irritated eyes, increased mucous and upper airway congestion, itchy skin rashes, abdominal pain, poor focus and attention, memory and sleep problems and more...

Apple iPads: Are they safe for children?

Each iPad has 5 operational antennas and can **only** connect to the internet via wireless mode. These antennas, unless disabled individually, will continually emit bursts of high frequency (GHz) every four seconds, approximately 900 spikes an hour. A child holding onto a wirelessly activated iPad will absorb significant amounts of microwave radiation into their hands, lap and face, even when there is no uploading or downloading activity occurring. This radiation is unnatural to the human body, which operates at a much lower frequency (Hz), and causes a stress-like response to occur at a biological level. This can cause ill symptoms to manifest and, in time, lead to serious diseases such as cancer.

American Academy of Pediatrics

Protect children's health and well-being. "Children are not little adults and are disproportionately impacted by all environmental exposures, including cell phone radiation. Current FCC standards do not account for the unique vulnerability and use patterns specific to pregnant women and children. It is essential that any new standard for cell phones or other wireless devices be based on protecting the youngest and most vulnerable populations to ensure they are safeguarded throughout their lifetimes."

Children's Health Expert Panel: Cell Phones & Wi-Fi – Are Children, Fetuses and Fertility at Risk?

In light of the growing evidence for harm to children and fetuses, Dr. Davis explained:

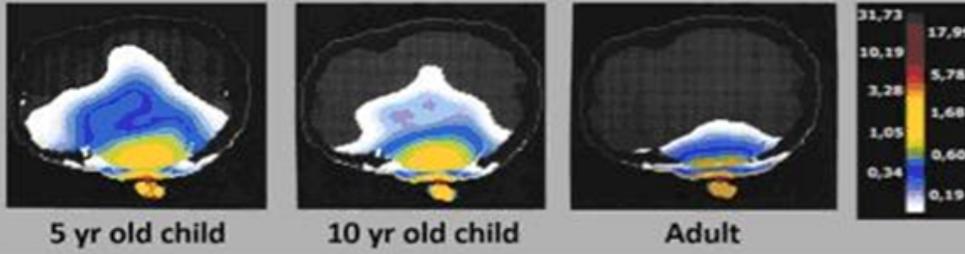

"A whole generation of people has been unaware of the risks of wireless radiation, and have not been taking precautions. This is why public health officials are so concerned. There is already evidence that exposure to radiofrequency radiation in excess leads to disease. And exposures have grown dramatically in the last few years. Our grandchildren and children are "being used as lab rats in an experiment with no controls... that's what we are doing with cell phone and wireless radiation with our children today."

"It may take some sort of catastrophe to get people's attention," said Frank Clegg, former president of Microsoft Canada and founder of Canadians 4 Safe Technology, referring to the increasing saturation of Wi-Fi technologies on the public at large, and especially, children.

Health Canada states: *"The department also encourages parents to reduce their children's RF exposure from cell phones since children are typically more sensitive to a variety of environmental agents. As well, there is currently a lack of scientific information regarding the potential health impacts of cell phones on children."*

Children have thinner skulls (deeper penetration), more water in brain (conductor), smaller size, absorb ten times more radiation in bone marrow than an adult, and immune and neurological systems are not fully developed until early twenties.

BC Confederation of Parent Advisory Councils

- BCCPAC- 800 School PACs & DPACs across BC
- Studied WiFi issue for THREE years

2012 AGM Resolutions adopted:

- Calls on Boards of Education to “cease to install Wi-Fi and other wireless networks in schools where other networking technology is feasible.”
- Calls on each Board of Education to “have one public school at each education level (elementary, middle, secondary) that is free of Wi-Fi, cordless phones and cell phones. This school will only be equipped with wired computers and wired telephones for personal, educational and administrative purposes.”

BC Teachers’ Federation – 40,000 teachers

BCTF 2013 Resolution:

“The BCTF supports members who are suffering from Electromagnetic Hypersensitivity by ensuring that their medical needs are accommodated in the workplace.”

Dr. Martha Herbert, PhD, MD Pediatric Neurologist, Massachusetts General Hospital Faculty, Harvard Medical School – Feb 2013

“I have published papers in brain imaging research, in physiological abnormalities in autism spectrum disorders, and in environmental influences on neurodevelopmental disorders such as autism and on brain development and function.

... Powerful industrial entities have a vested interest in leading the public to believe that EMF/RFR, which we cannot see, taste or touch, is harmless, but this is not true. Please do the right and precautionary thing for our children.”

<http://goo.gl/dU57Qx>

The American Academy of Environmental Medicine (AAEM)

“Multiple studies correlate radiofrequency exposure with diseases such as cancer, neurological disease, reproductive disorders, immune dysfunction, and electromagnetic hypersensitivity... The fact that radiofrequency exposure causes neurological damage has been documented repeatedly... Other neurological and cognitive disorders such as headaches, dizziness, tremors, decreased memory and attention, autonomic nervous system dysfunction, decreased reaction times, sleep disturbances and visual disruptions have been reported to be statistically significant in multiple epidemiological studies with radiofrequency exposure occurring non-locally.”

How much more proof is needed before school officials take cautionary action to protect students from harmful wireless radiation? Existing ‘wired’ connections in schools emit NO microwave radiation and, until more is known about children’s risk, is the safest way to access the internet.
